ESTUDIO MARISCAL

We imagined gnomes' chairs and tables so that children can have fun.

Alma is a basic, long-lasting, comfortable, stackable and functional chair, made in polyurethane. On the rear part of the back of the chair there are some veins which become graphics to add an emotional, symbolic element: the branches of trees that refer to the illustrations in fairytales or gnomes' chairs.

A programme was developed for the robust, functional table, Linus, which offers a response to different needs. It is made in white, and can be round, square or rectangular. The design of the legs means that several tables can be interlocked. The legs are made of polypropylene plastic and the top of laminated plastic.

Both of them are so resistant and stable that they are ideal for schools and play schools.
